01

Introduction

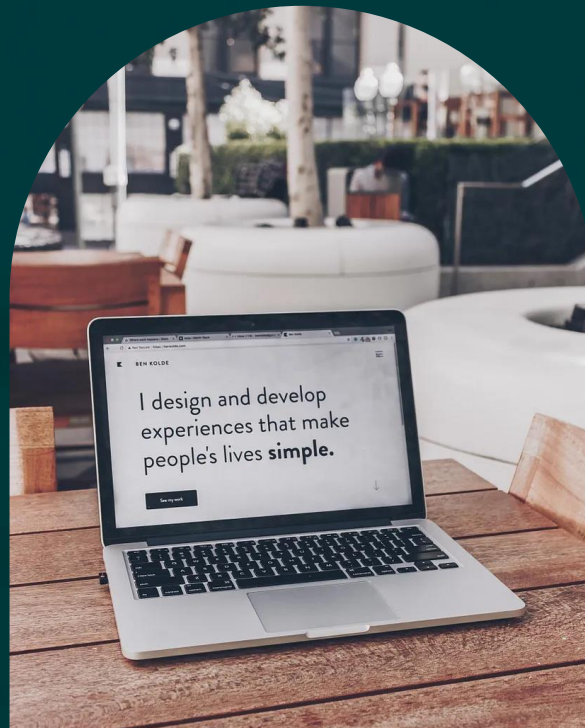

Productivity Software

Productivity software refers to a category of computer programs and applications designed to help users accomplish tasks more efficiently, typically in a work, study, or personal context. The main goal of productivity software is to improve performance, organization, and output quality by automating or simplifying routine tasks.

02

Productivity software

Productivity software categories:

Some common types of productivity software include:

<u>Word Processing Software</u>	(Microsoft Word, Google Docs) – for creating and editing text documents.
